

## Visualizing Pretest/ Dartez

True/False:

1. Good readers create mental images only during reading, not after.
2. Creating mental images is a skill that some people have and other people do not; it cannot be practiced and developed.
3. We can use visualizing to help us to make inferences and draw conclusions while reading.
4. Every reader will have the same visual images regardless of background knowledge (schema).
5. Creating visual images does not help us to remember important details from the text.
6. Being able to create visual images **does not** affect one's writing ability.
7. Creating visual images helps us to appreciate the detail authors use while writing.
8. Readers' mental images never change after they are compared with those of other readers.
9. Once a reader has a mental image, he or she often rarely changes this mental image to incorporate new information.
10. Readers who are visualizing only use sight; they do not use the senses of smell, taste, hearing, and feeling.
